Asia is bordered by the Arctic, Pacific, and Indian Oceans. Asia's physical geography, environment and resources, and human geography can be considered separately. Asia can be divided into five major physical regions: mountain systems; plateaus; plains, steppes, and deserts; freshwater environments; and saltwater environments. Mountain Systems

Asia: Physical Geography | National Geographic Society

The only landlocked country is the rural and remote country of Laos, which borders China, Vietnam, and Thailand. The physical geography of Southeast Asia includes beaches, bays, inlets, and gulfs. The thousands of islands and remote places allow refuge for a wide variety of cultural groups and provide havens for rebellious insurgents, modern-day pirates, and local inhabitants. Southeast Asia can be divided into two geographic regions.

Southeast Asia - GitHub Pages

The Bering Straits divide Asia from North America. On the southeast of Asia are the Malay Peninsula (the limit of mainland Asia) and Indonesia ("Isles of India", the former East Indies), a vast nation among thousands of islands on the Sunda Shelf, large and small, inhabited and uninhabited. Australia nearby is a different continent.

Geography of Asia - Wikipedia

Southeast Asia has been perceived as a laboratory for studying plate tectonics. It is an assemblage of large river basins, peninsulas and archipelagos, and seas surrounded by islands. It is an area of great physical variations where parts of the physical environment have been significantly degraded anthropogenically, following rapid population growth and development.
